Job Description

Manages manufacturing process from start to finish. Will help bring the company to the next level in efficiency and quality. This candidate must be willing to perform the most basic tasks (assembly work, soldering, etc.) in order to make the company successful.

Applies knowledge of assembly and manufacturing practices by assembling a variety of small electro-mechanical assemblies.

Implement more advanced assembly work instructions, test procedures, and high-level manufacturing processes.

Maintains adherence to production, test, and quality system procedures. Continuously improve manufacturing procedures in real time.

Communicates with management and engineering to accomplish tasks and correct production discrepancies.

Provides input and recommendations to management and team members on improvement opportunities based on data and observations.

Performs other duties as required.

Experience:

High School diploma or equivalent; post-secondary education a plus.

Knowledge of cable routing, harness configuration, soldering, wiring & crimping standards.

Minimum 5 years' experience in a Manufacturing environment.

Strong Mechanical skills and knowledge of current assembly and manufacturing practices.

General knowledge of operating hand tools, portable power tools, and bench tools.

Strong attention to detail, quality focused and a quick learner.

Excellent communication skills.

Intermediate computer skills and the ability to operate computer terminals and general software applications.

Position will begin part-time leading to full time for the right candidate!
